Analysis Report

The data being wrangled and analyzed is the data for the famous twitter account 'WeRateDogs'. The idea of this account is that people send photos of their dogs and that account will tweet it with a funny comment and a rating out of 10. However, the ratings given to each dog are almost always greater then 10. When exploring the dataset, I was curious to know which dog breed was the most popular, which breed got the highest count of tweets and favorites. The analyses of the data for more than 2000 tweets using python libraries enabled me to get answers to the following questions:

1) What dog breed got the highest number of retweets?
The tweet that got the highest number of retweets had a picture of a Labrador retriever, and it received 79515 retweets.
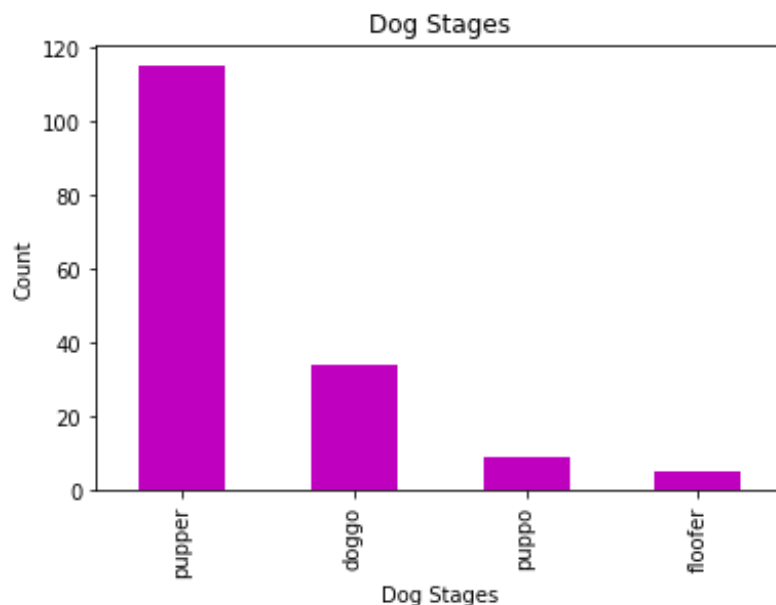

2) What dog breed got the highest number of favorites?
The tweet that got the highest number of favorites had a picture of a Labrador retriever, and it received a total of 13107 favorites.

3) What is the most tweeted dog breed?
The most tweeted dog breed is golden retriever, it was tweeted 75 times. Next comes the Labrador retriever, where it was tweeted 54 times.

4) What is the most frequent dog stage?

As shown in the bar chart above, the pupper dog stage is by far the most frequent dog stage. Mentioned in 115 tweets. After pupper comes doggo with 34 count. Floofer is the less frequent dog stage with a count of 5.
